-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION

Specification

1. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Objections

2. Claim 17 is objected to because of the following informalities:
 - Claim 17, line 4, delete "said".

Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 11, 12 and 36 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

- Claim 11 recites the limitation "said density detecting means" in line 9. There is insufficient antecedent basis for this limitation in the claim.
- Claim 36 recites the limitation "said density detecting means" in line 10. There is insufficient antecedent basis for this limitation in the claim.
- Claim 12 is also rejected for the same reason because of its dependency on claim 11.

Allowable Subject Matter

5. Claims 1-10, 13-16 and 18-35 are allowed.
6. Claims 11, 17 and 36 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph and/or the objection(s), set forth in this Office action.
7. Claim 12 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
8. The following is an examiner's statement of reasons for allowance:

None of the prior art of record teaches or suggests an image forming apparatus comprising a low-density patch image formed under a low-density side image forming condition, which makes an image density the lowest among the multiple levels of the image forming condition, having a length which is equal to or longer than a circumferential length of the image carrier in a patch length direction which corresponds to a direction in which the image carrier moves, the density detecting means detects a density in a portion of the low-density patch image which corresponds to the circumferential length of the image carrier, and a toner density of the low-density patch image is calculated.

Prior Art

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

- Ino et al. ['162] disclose an image forming apparatus with automatic density

compensation.

- Ojima et al. ['466] disclose an image density control.
- Uchiyama et al. ['654] disclose an image forming apparatus with development control based on density detection of developed control image.
